

Land Bank Portal - Haryana

A GIS-Based Digital Platform for Transparent Land Governance

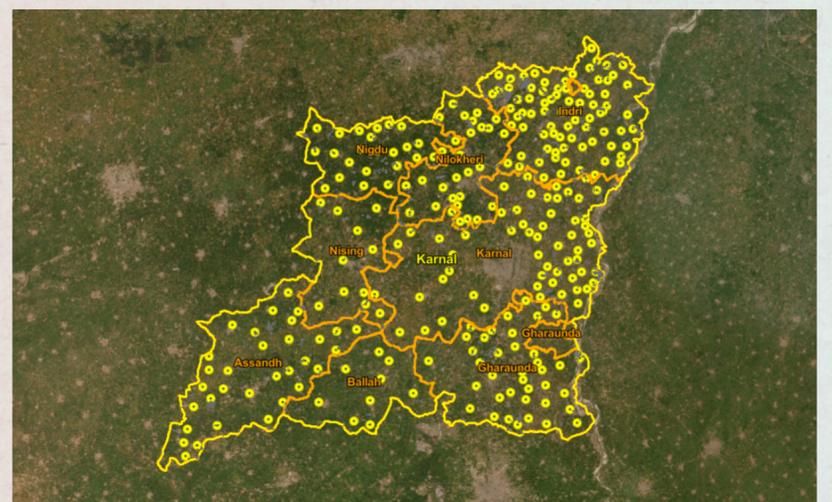

Introduction

The Land Bank Portal - Haryana is a GIS-based digital platform developed to ensure transparent and efficient land governance. It provides a centralized database of government-owned land with accurate spatial and legal information.

Background

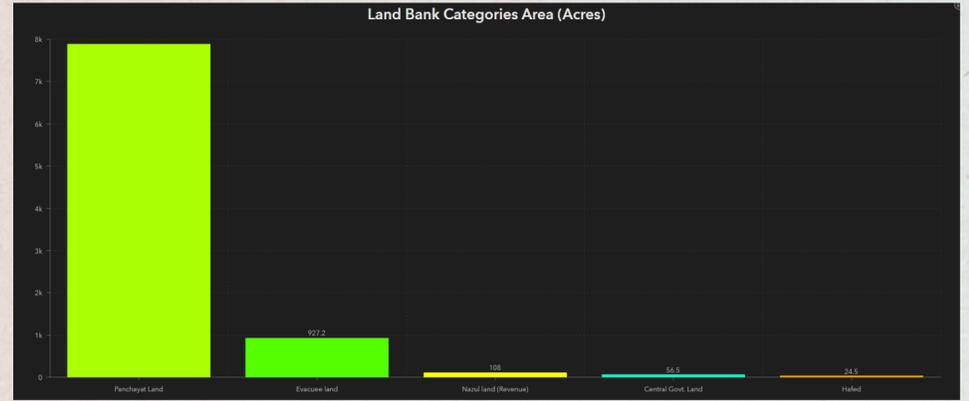

As per Government of Haryana initiatives such as the Land Bank (e.g., District Karnal), there is a need to systematically identify, catalogue, and utilize unused government land. Traditional land allocation processes are fragmented and lack spatial integration. The Land Bank Portal aims to address this gap through GIS-based digital governance.

Objectives of the Project

- Create a centralized digital inventory of government land
- Categorize land based on ownership and use
- Enable GIS-based land mapping and visualization
- Improve Ease of Doing Business in Haryana
- Support industrial, infrastructure, and public projects integration.
